Summary

Aspiring **Software Engineer** with practical experience in technical **problem solving**. Hands-on with building modern, **scalable software** solutions.

Strong curiosity for learning new technologies, improving workflows, and building efficient software solutions. Known for persistence in debugging complex issues and quickly adapting to new development environments.

Technologies & Technical Skills

Languages: C++, C#, Python, JavaScript and SQL.

Technologies: .NET Core, LINQ, EF Core, Flask, REST APIs, MSSQL Server, and JWT.

Skills:

- Strong understanding of data structures, algorithms, and problem-solving gained through consistent practice in competitive programming platforms.
- Experience in backend development using ASP.NET Core and Entity Framework Core for building RESTful APIs and web systems.
- Proficient with Git and GitHub for version control and collaborative development workflows.
- Familiar with API documentation using Swagger/OpenAPI and writing clean, maintainable backend code.

Projects

Accounting Mangment system

April 2026 – May 2026 🔄

Freelancing Project

- Designed and delivered a **end-to-end Accounting Management System** using ASP.NET Core, covering authentication, inventory, invoicing, and **analytics** in a single integrated solution.
- Implemented secure **JWT Bearer authentication** on top of ASP.NET Core Identity, issuing signed tokens with role claims and protecting all business endpoints.
- Developed a **transactional billing module** that validates stock, aggregates duplicate line items, deducts inventory on sale, and automatically restores it on bill deletion, alongside a Recharts-powered dashboard for daily/monthly sales trends, revenue, and low-stock alerts.
- Skills: **ASP.NET Core**, EF Core, SQL Server, JWT, React, Recharts, and full-stack system design.

Student Management System

May 2026 – May 2026 🔄

Freelancing Project

- Developed an end-to-end **Student Management System** using **ASP.NET Core** to manage students, attendance, and grades.
- Implemented secure **JWT Bearer authentication** on top of ASP.NET Core Identity, issuing signed tokens with role claims and protecting all business endpoints.
- Designed **RESTful APIs** and implemented efficient CRUD operations with a structured backend–frontend architecture.
- Skills: **ASP.NET Core**, EF Core, SQL Server, JWT, REST APIs, and backend architecture practices.

E-commerce System

May 2026 – June 2026 🔄

Personal Project

- Designed and delivered an **E-commerce API System** using ASP.NET Core, covering authentication, product catalog, order processing, and inventory management within a scalable and secure backend architecture.
- Implemented robust **JWT Bearer authentication** with role-based authorization, securing all API endpoints and ensuring controlled access to business operations.
- Applied DTOs, EF Core, Identity, LINQ, SQL Server, Dependency Injection, JWT, and RESTful API design for maintainable services.
- Skills: **Clean Architecture**, ASP.NET Core Web APIs, EF Core, Identity, LINQ, and SQL Server.

Education

Faculty of Computer & Information - KFSU *BS in Information Systems*

Sep 2020 – May 2024
